HAOQI LUO

Seattle, WA | haoqi.luo23@hoosac.org | +1 838-895-6933 | hql7-luo.github.io | github.com/hql7-luo

EDUCATION

University of Washington, Michael G. Foster School of Business, Seattle, WA — Sep 2023 - Mar 2027 (Expected)
Bachelor of Arts in Business Administration; Concentrations: Information Systems; Operations & Supply Chain Management

- **Academics:** GPA 3.85/4.00; GRE 333 (Quantitative 170/170, Verbal 163, Analytical Writing 5.5)
- **Honors:** Dean's List all 9 quarters; Annual Dean's List 2023-24, 2024-25, 2025-26; Highest score in class on both midterm and final exams, QMETH 450 (optimization & simulation); Most Trendy Technology Award (team), IS 451, Jun 2026
- **Quantitative Coursework:** Business Calculus (incl. intro multivariable); Statistics; Optimization & Simulation; Business Data Analytics (Python, regression, random forests); Python Programming; Database Management (SQL); Managerial Economics

WORK EXPERIENCE

Taizhou Yongzeng Color Printing Co., Ltd. — Taizhou, China
Business Operations & Digitalization Associate — Aug 2026 - Sep 2026

- Helped merge scattered order and product files into one database of hundreds of products; standardized specs and product codes, removed duplicates and linked orders to products.
- Analyzed 1,000+ ERP and Excel order records to track volume by customer and product and flag orders at risk of late delivery.
- Handled customer orders end to end, from spec and quantity checks to production scheduling and delivery tracking.

Challenger Trading (Wenzhou) Co., Ltd. — Wenzhou, China
International Trade Data Analyst Intern — Jul 2026 - Aug 2026

- Turned 1,000+ Alibaba.com inquiry and RFQ records into a clean, searchable Excel buyer database, replacing manual lookups.
- Set a weighted scoring rule (product fit, order size, market) to rank 100+ RFQs a day with AI help; after reviewing the top ~10, I quoted the best 1-2; over half of those buyers replied.
- Researched 50+ potential buyers in Eastern Europe and Central Asia and sorted them into priority tiers for sales follow-up.
- Taught coworkers to use AI tools for emails, translation and customer research, covering setup, model choice and prompt writing.

Caitong Securities Co., Ltd. — Taizhou, China
Business Intern — Aug 2025 - Sep 2025

- Cleaned and analyzed listed-company financials and market data in Excel for daily market reviews and industry research.

ANALYTICS PROJECTS

Supply Chain Decision Intelligence | *Independent project* | *Python, SQL* — Oct 2026

- Built a Python and SQL pipeline with a star-schema database on a public retail dataset (4.85M daily records, 50,000 store-product series), plus a dashboard for ABC/XYZ segments and safety-stock scenarios.
- Found stockouts in 44.0% of daily records and on 76.4% of zero-sales days, so zero sales often did not mean zero demand.
- Compared four forecasting methods with 3 expanding-window folds and an untouched 7-day holdout; simple exponential smoothing (WAPE 36.0%) beat per-series model selection (37.4%), so I kept the simpler model.

Foreign Trade Enterprise Knowledge Assistant | *Independent project* | *Python, SQL, vector search* — Sep 2026

- Started after seeing that one accurate quote at my trade internship could take 10+ minutes to put together; I taught myself retrieval methods and used the tool for my own quote lookups and second checks.
- Combined BM25 and dense vector retrieval with rank fusion; answers cite sources, abstain when evidence is weak and flag conflicts for staff review (Recall@5 92.5%, MRR 0.885 on a 20-question synthetic holdback set).

LLM Price-Performance Analytics | *UW IS 451 team project* | *Python (statsmodels)* — Apr 2026 - Jun 2026

- Fit a log-price OLS regression on 299 paid LLM API models (R^2 0.575); open-source status was the strongest discount signal, and provider brand still moved price at similar capability.
- Independently extended the project after the course: reproduced the reported results from my original notebook, added diagnostics and 5-fold grouped cross-validation (out-of-sample R^2 0.41), and flagged models priced above or below prediction as candidates for testing.

AutoZone Workforce Optimization | *UW QMETH 450 team project* | *Excel Solver* — Sep 2025 - Dec 2025

- Formulated a linear program for driver hiring and training under mileage and service constraints; modeled ~$142.7K (~15%) in potential annual labor savings.
- Selected exponential smoothing ($\alpha = 0.75$, MAPE 6.3%) on 2020-2025 freight history to forecast 2026-2030 staffing needs.

ADDITIONAL INFORMATION

- **Leadership:** Study Group Organizer & Peer Tutor, UW (2025 - Present): run 3-6 person study groups for quantitative courses, tutor Excel Solver and Monte Carlo simulation, and help new international students plan courses
- **Service:** Volunteer English teacher and charity bazaar organizer, Duo Duo Yun School for Children with Autism (2022 - Present)
- **Technical Skills:** Python (pandas, NumPy, statsmodels, matplotlib), SQL, R, Excel (Solver, pivot tables), Streamlit, Git/GitHub
- **Methods:** Regression, forecasting and backtesting, linear/integer optimization, Monte Carlo simulation, inventory modeling
- **Other Builds:** Export Sales Intelligence (Python, Streamlit, SQLite; 128 automated tests)
- **Languages & Interests:** Mandarin (native), English (fluent); basketball, fitness, tech-company earnings and AI trends
